Drupal 7 phptemplate cheatsheet		
page.tpl.php variables		
General Utility Variables		
\$base_path	The base URL path of the Drupal installation.	
\$directory	The directory the template is located	
\$is_front	TRUE if the current page is the front page.	
\$logged_in \$is_admin	TRUE if the user is registered and signed in. TRUE if the user has permission to access administration	
şıs_admın	pages.	
Site Identity		
\$front_page	The URL of the front page.	
\$logo	The path to the logo image	
\$site_name	The name of the site	
\$site_slogan	The slogan of the site	
\$highlight	Replace of a \$mission	
\$title_prefix	An array containing additional output populated by modules	
\$title	The page title	
\$title_suffix	An array containing additional output populated by mod-	
	ules	
\$messages	HTML for status and error messages	
\$tabs	Tabs linking to any sub-pages beneath the current page	
\$action_links	Actions local to the page	
\$feed_icons	A string of all feed icons for the current page.	
\$node	The node object	
Navigation		
\$main_menu	An array containing the Main menu links for the	
<u></u>	site, if they have been configured.	
\$secondary_menu	An array containing the Secondary menu links for the site, if they have been configured.	
\$breadcrumb:	The breadcrumb trail for the current page.	
yoredderamo.	html.tpl.php variables	
\$css	An array of CSS files for the current page.	
\$language	The language the site is being displayed in.	
\$language->dir	contains the language direction. It will either be 'ltr' or 'rtl'.	
\$language->language	contains its textual representation.	
\$head_title	A modified version of the page title, for use in the TITLE tag	
\$head_title_array	An associative array containing	
	title : The title of the current page, if any. name: The name of the site.	
	slogan: The slogan of the site, if any, and if there is no title.	
\$head	Markup for the HEAD section (including meta tags, keywor	
	tags, and so on).	
\$styles	Style tags necessary to import all CSS files for the page	
\$scripts	Script tags necessary to load the JavaScript files and setting	
¢nago ton	for the page.	
\$page_top	Initial markup from any modules that have altered the page. This variable should	
\$page	The rendered page content.	
\$page_bottom	Final closing markup from any modules that have altered	
+pago_actio	the page. This variable should always be output last, after a	
	l athor dunancis contant	
	other dynamic content.	
\$classes	String of classes that can be used to style contextually	
\$classes	String of classes that can be used to style contextually through CSS.	
\$classes Available Variables	String of classes that can be used to style contextually	
	String of classes that can be used to style contextually through CSS.	
Available Variables	String of classes that can be used to style contextually through CSS. block.tpl.php variables	
Available Variables \$title	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title	
Available Variables \$title \$content	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content.	
Available Variables \$title \$content \$block->module	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block.	
Available Variables \$title \$content \$block->module \$block->delta	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS	
Available Variables \$title \$content \$block->module \$block->region \$classes \$title_prefix \$title_suffix Helper Variables	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values	
Available Variables \$title \$content \$block->module \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array \$block_zebra	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values Outputs 'odd' and 'even' dependent on each block region.	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values Outputs 'odd' and 'even' dependent on each block region. Same output as \$block_zebra but independent of any block	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array \$block_zebra \$zebra	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values Outputs 'odd' and 'even' dependent on each block region. Same output as \$block_zebra but independent of any block region.	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array \$block_zebra \$zebra	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values Outputs 'odd' and 'even' dependent on each block region. Same output as \$block_zebra but independent of any bloc region. Counter dependent on each block region.	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array \$block_zebra \$zebra	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values Outputs 'odd' and 'even' dependent on each block region. Same output as \$block_zebra but independent of any block region. Counter dependent on each block region. Same output as \$block_id but independent of any block	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array \$block_zebra \$zebra \$block_id \$id	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values Outputs 'odd' and 'even' dependent on each block region. Same output as \$block_zebra but independent of any block region. Counter dependent on each block region. Same output as \$block_id but independent of any block region.	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array \$block_zebra \$zebra \$block_id \$id	String of classes that can be used to style contextually through CSS. Block.tpl.php variables	
Available Variables \$title \$content \$block->module \$block->delta \$block->region \$classes \$title_prefix \$title_suffix Helper Variables \$classes_array \$block_zebra \$zebra \$block_id \$id	String of classes that can be used to style contextually through CSS. block.tpl.php variables Block title Block content. Module that generated the block. An ID for the block The block region embedding the current block String of classes that can be used to style contextually through CSS An array containing additional output An array containing additional output Array of html class attribute values Outputs 'odd' and 'even' dependent on each block region. Same output as \$block_zebra but independent of any block region. Counter dependent on each block region. Same output as \$block_id but independent of any block region.	

Available Variables Stitle The title of the node. Scontent An array of node items. Use render(Scontent) to print them all or print a subset such as render(Scontent) field, example(I). Use hiddescontent) field example(I) to temporarily suppress the printing of a given element. Suser picture The node author's picture from user-picture. ptp.php. Sdate Formatted creation date Sname Themed username of node author output from theme_username(). Sterms the themed list of taxonomy term links output from theme_link(g). Snode_url Direct url of the current node. Sdisplay, submitted Whether submission information should be displayed. Submitted Submission information created from Sname and Sdate during Sclasses String of classes that can be used to style contextually through CSS Stitle_prefix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array of node of the node author. Streated Time the node was published formatted in Unix timestamp. Sclasses_array Array of html class attribute values, Scebra Outputs either "even" or 'odd'. Sid Position of the node increments each time it's output. Steaser Flag for the full page state. Sporomote Status Steaser Flag for the full page state. Sporomote Status Flag for the full page state. Sporomote Flags true when the current user is an administrator. Screadmore Flags true when the current user is an administrator. Screadmore Flags true when the current user is an administrator. Screadmore Flags true when the current user is an administrator. Screadmore Flags true when the current user is an administrator. Screadmore Flags true when the curren		us de tal aba assisbles	
Stitle The title of the node. Scontent An array of node items. Use render(Scontent) to print them all, or print a subset such as render(Scontent) field. example(1), Use hide(Scontent) field. example(1) to temporarily suppress the printing of a given element. Suser_picture The node author's picture from user-picture.tpl.php. Sterma Themated creation date Sname Themated username of node author output from theme_username(). Sterms the themeel list of taxonomy term links output from theme_links(s). Snode_url Direct unl of the current node. Sdisplay_submitted Whether submission information should be displayed. Submistion information created from Sname and Sdate during Sclasses String of classes that can be used to style contextually through CSS Stitle_prefix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array of thrind class attribute values. Scomment_count Number of comments attached to the node. Suid User ID of the node author. Screated Time the node was published formatted in Unix timestarms. Scebra Outputs either "even" or "odd". Sid Position of the node. Increments each time it's output. Sterms	Available Variables	node.tpl.php variables	
them all, or print a subset such as render(Scontent/field example)!) Use high-content/field example)! Use the decample Use to remove rarily suppress the printing of a given element. State Formatted creation date Sname Themed username of node author output from theme_username Sterms the themed list of taxonomy term links output from theme_links). Snode url Direct unl of the current node. Sdisplay_submitted Whether submission information should be displayed. Submisted Submission information created from Sname and Sdate during Sclasses String of classes that can be used to style contextually through CSS Stitle_prefix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Stitle_suffix An array containing additional output populated by modules Store I Full node object Stype Node type Scomment_count Number of comments attached to the node. Stitle Suffix An array of Intrin class attribute values. Scepara Outputs either "even" or "odd!" Sclasses_array Array of Intri class attribute values. Scebra Outputs either "even" or "odd!" Stems An array of Intri class attribute values. Scebra Outputs either "even" or "odd!" Stems An array of Intri class attribute values. Stems Halp for the node increments each time it's output. Stems An array of Intri class attribute values. Sceparal Raja for the ful		The title of the node.	
Sdate Formatted creation date Sname Unemanusername of node author output from theme_username(). Sterms themed list of taxonomy term links output from theme_links().
